

Software Requirements Specification (SRS)

1. Introduction

1.1 Purpose

The purpose of this document is to define the functional and non-functional requirements of the Expense Tracker application. This document serves as a reference for the development team during implementation and future maintenance.

1.2 Scope

Expense Tracker is a mobile application that enables users to manage their personal finances by recording income, expenses, monitoring wallet balances, analysing spending behaviour and viewing financial statistics.

The application provides a simple, modern and user-friendly interface to help users make informed financial decisions.

2. Functional Requirements

2.1 User Authentication

The application shall allow users to:

- View Splash Screen
- View Onboarding Screens
- Login using Email and Password
- Create a New Account
- Reset Forgotten Password
- Logout from the application

2.2 Home Module

The Home screen shall allow users to:

- View total balance
- View total income
- View total expenses

- View recent transactions
- Navigate to Add Income
- Navigate to Add Expense
- Navigate to Profile
- Navigate to Transaction History

2.3 Statistics Module

The Statistics screen shall allow users to:

- View weekly statistics
- View monthly statistics
- View yearly statistics
- View expense overview
- View category breakdown
- Analyze spending behaviour

2.4 Wallet Module

The Wallet screen shall allow users to:

- View wallet balance
- Add money
- Send money
- Pay bills
- View transaction history
- View upcoming bills

2.5 Connect Wallet Module

The user shall be able to:

- Connect Debit Card
- Connect Bank Account
- Connect PayPal
- View linked payment methods

2.6 Profile Module

The user shall be able to:

- View profile information
- Edit profile
- Change password
- Manage notification settings
- View application settings
- Logout

3. Non-Functional Requirements

The application shall:

- Have a responsive UI
- Provide smooth navigation
- Load screens quickly
- Support Android devices
- Maintain secure communication with backend APIs
- Follow Material Design principles where appropriate
- Be easy to maintain and extend

4. Future Functionalities

The application may include:

- Push Notifications
- Dark Mode
- Budget Goals
- AI Expense Insights
- PDF Report Export
- Cloud Backup
- Multi-Currency Support
- Fingerprint / Face ID Authentication

5. Assumptions

- Backend APIs will be developed using Django REST Framework.
- Authentication will be handled by the backend.
- All financial data will be stored securely in the backend database.
- The mobile application will communicate using REST APIs over HTTPS.
