

User Manual (Installation & User Guide)

1. Introduction

The Expense Tracker application is designed to help users manage their personal finances by recording income and expenses, monitoring balances, analyzing spending patterns, and connecting bank accounts.

This guide explains how to install, configure, and use the application.

2. System Requirements

Mobile Device

- Android 8.0 (API 26) or above
 - Minimum 3 GB RAM
 - Internet connection (recommended)
 - Storage: 100 MB available space
-

Development Environment

- Node.js
 - React Native CLI
 - Android Studio
 - Android SDK
 - Java JDK
 - VS Code
 - Git
-

3. Installation Guide

Step 1

Clone the repository

```
git clone <https://github.com/haseebmustafa279/ExpenseTracker>
```

Step 2

Navigate to the project

```
cd ExpenseTracker
```

Step 3

Install dependencies

```
npm install
```

or

```
yarn
```

Step 4

Start Metro

```
npx react-native start
```

Step 5

Run Android

```
npx react-native run-android
```

4. Application Flow

Splash Screen

Bottom Navigation

└— Home

└— Statistics

└— Wallet

└— Profile

5. Home Screen

The Home screen displays:

- Greeting
- User Profile
- Total Balance
- Income
- Expense
- Add Income button
- Add Expense button
- Recent Transactions

Users can:

- Add income
 - Add expenses
 - View recent transactions
 - Open profile
-

6. Statistics Screen

Users can:

- View monthly statistics
 - View income
 - View expenses
 - Analyze category spending
 - View spending overview
-

7. Wallet Screen

The Wallet screen provides:

- Total Balance
- Quick Actions
 - Add
 - Pay
 - Send
- Transactions
- Upcoming Bills

Users can also access the **Connect Wallet** flow from this screen.

8. Connect Wallet

The wallet connection consists of two screens.

Screen 1

Users enter:

- Card Holder Name
- Card Number
- CVC
- Expiration Date
- ZIP Code

After entering details, tap **Next**.

Screen 2

Users choose one of the available connection methods:

- Bank Link
- Micro Deposits
- PayPal

After selecting a method, the wallet connection process continues.

9. Profile Screen

The Profile screen allows users to:

- View profile information
 - Update personal details (*future enhancement*)
 - Change password (*future enhancement*)
 - Logout
-

10. Navigation Guide

Action	Result

12. Troubleshooting

Application does not start

Possible causes:

- Metro not running

- Missing dependencies
- Android emulator not running

Solution:

npm install

npx react-native start

npx react-native run-android

Build Failed

Possible causes:

- Gradle issue
- SDK issue
- Incorrect JDK

Solution:

cd android

gradlew clean

Then rebuild.

Metro Port Busy

Run

npx react-native start --reset-cache

Images Not Showing

Check:

- Image path
- require() syntax
- File extension

- Asset location
-

Navigation Errors

Verify:

- Screen registered
 - Route name matches
 - NavigationContainer exists
 - Stack/Tab configuration is correct
-

13. Frequently Asked Questions (FAQ)

Q1. Can I use the app without the internet?

Yes. Basic features work offline. Cloud synchronization will be added in a future version.

Q2. Can I connect multiple bank accounts?

This feature is planned for a future release.

Q3. Is my financial data secure?

The application uses secure authentication. Additional security measures such as encryption and two-factor authentication are planned for future versions.

Q4. Can I export my transactions?

Export to PDF, Excel, and CSV is planned for future releases.

Q5. Which backend will the application use?

The application is planned to integrate with a **Django REST Framework** backend, providing secure APIs, JWT authentication, and PostgreSQL database support.

14. Conclusion

The Expense Tracker application provides a modern and intuitive platform for managing personal finances. It enables users to record income and expenses, monitor balances, analyze spending patterns, and connect financial accounts. The project has been designed with scalability in mind, allowing future integration of advanced features such as AI-powered insights, cloud synchronization, budgeting tools, and a Django-based backend.
